Abstract of the Disclosure

Editing Image Data

5   A method of editing image data, wherein an image frame comprising a plurality of components is generated by processing a plurality of data processing nodes arranged in a hierarchical structure, said image frame is displayed to a user, said user manually selects one of said plurality of components for editing, a first data processing node considered to be

10   appropriate to said component is selected and editing tools relevant to said first data processing node are displayed to said user.
